Here are some interesting facts about water:

1. Water is made up of 2 hydrogen atoms and 1 oxygen atom, with the chemical formula H₂O.
2. It's the only substance that naturally exists in all 3 states of matter: solid, liquid, and gas.
3. The human body can survive for weeks without food but only a few days without water.
4. Less than 1% of the world's fresh water is readily accessible for direct human use.
5. Approximately 68.7% of the fresh water on Earth is trapped in glaciers.

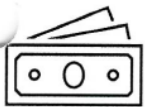

Conservation is essential for ensuring that vital resource remains available for future generations.

Knowing these facts and implementing simple conservation practices, you can make a difference.

Freshwater Scarcity: Only about 2.5% of Earth's water is freshwater, and less than 1% is easily accessible for human use. This makes conservation crucial.

Agricultural Impact: Agriculture accounts for approximately 70% of global freshwater use. Efficient irrigation techniques can save vast amounts of water
