Did you know:

Water is Essential for everyday life, we can start with the easy things such as below:

Start composting.

Composting food wastes saves water by reducing the water needed to run a garbage disposal. If you don't have a garden, check with your neighbor.

Watering

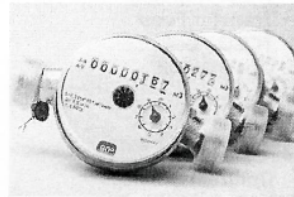

Do not water on windy days, which will waste water through excessive evaporation.

Explore DIY drip watering.

You can make your own drip watering container by poking small holes in the bottom of a water jug. Simply heat a nail or other small sharp object to make a few holes. Fill it with water and place it next to your plant. Use a few jugs for larger plants and smaller jugs for smaller plants.

DON'T FORGET

**June 7th is the next
WaterBoard meeting
@10:00**

With the new grant that Anita wrote up and was approved, all the old meters were replaced and have a life span of 20 years

How does a water meter work?

Water meters are built to record water that flows through your property from a particular supply system. There are cogs and spindles inside your water meter that rotate when a specific volume of water has passed through the meter, which is then measured by a handful of dials with numbers on them to reflect the amount of water used.

Reminder

With the new water rates, those of you who have checks issued by the bank need to have the bank update the amount.

New Rates:

\$64.00 for the first 2,000 gallons, \$30.00 for every 1,000 gallons after that. Standby rate will be \$20.00

If you would like your invoice emailed each month, please send an email to bcrwsc@aol.com to let Anita know and include your account number.
